## Episodio 9 - Route Wildcard Constrains

---

Nos enseñan a agregar restricciones a las rutas.

```
Route::get('posts/{post}', function ($slug) {
    $path = __DIR__ . "../resources/post/{$slug}.html";

    if (! file_exists($path)) {
        return redirect('/');
    }

    $post = file_get_contents($path);

    return view('post', ['post' => $post]);
})->where('post', '[A-z_\-]+');
```
