Episodio 10 - Use Catching for Expensive Operations

Nos enseñan a guardar datos en la memoria caché para mejorar el rendimiento.

```
Route::get('posts/{post}', function ($slug) {
    if (! file_exists($path = __DIR__ . "/../resources/post/{$slug}.html")) {
        return redirect('/');
    }

    $post = cache()->remember("post.{$slug}", 1200, fn() =>
    file_get_contents($path));

    return view('post, ['post' => $post]);
})->where('post', '[A-z_\-]+');
```
